

Zhengyang Hu (胡正阳)

Southeast University

Address: Nanjing, Jiangsu, P. R. China

Mobile: (+86) 18952197998

Email: huzhengyang@seu.edu.cn

Personal Website: <https://zhengyang-hu.github.io/>

Research interests

Renewable Power Integration, Optimization and Control, Application of AI in Power Systems, and Smart Grids

Education

Ph.D. in Electrical Engineering

Southeast University

2023.09

Dissertation: Research on the transient frequency response characteristics and active control strategy for wind power plant.

Supervisor: [Prof. Bingtuan Gao](#).

B.E. in Electrical Engineering

China University of Mining and Technology

2016.06

Acquire solid fundamentals in mathematics, power systems, power electronics, and control theory. Rank 24th (out of the entire batch of 434 students) during the academic year 2012-2016.

Professional Experience

- Postdoc Fellow, The Hong Kong Polytechnic University, awaiting induction
- Intern, China Electric Power Research Institute, 2018/04 - 2019/11

Research Projects

Skills of **Matlab/Simulink**, **PSCAD** (software) and **DSP**, **RTLAB** (hardware) are used in the following projects.

1. **2023-2023** Research and implementation of Spatiotemporal Collaborative Frequency Control Technology

in the Sending-end Power Grid with High Proportion New Energy Generation (Science and Technology Project of State Grid Corporation of China)

Involved in the research on the frequency characteristics of the sending-end power system with high proportion new energy generation and the corresponding frequency regulation strategy for new energy generation.

2. **2021-2023** Active and fast support of transient frequency and voltage for photovoltaic / wind power plant (National Key R&D Program of China under grant 2021YFB2400500)
Involved in the research on the active and fast frequency support technologies and the optimization of steady-state operating conditions for wind power plant.
3. **2018-2019** Research on Impact Mechanism and Active Support Technology for Application of Power Electronic on Renewable Energy in Regional Grid (sponsored by China Electric Power Research Institute)
Responsible for the scenario construction of photovoltaic/wind power plant integration and analysis of aggregation characteristics of photovoltaic/wind power plant.
4. **2017-2017** Research on the Impact of Large-scale Renewable Energy Integration on Damping Characteristics of Power System and the Corresponding Active Power Support Control Strategy (sponsored by China Electric Power Research Institute)
Involved in the analysis and control of damping characteristics of the power system integrated with renewable energy generation based on virtual synchronous generator.
